

Package: c3 (via r-universe)

August 21, 2024

Type Package

Title 'C3.js' Chart Library

Description Create interactive charts with the 'C3.js' [<http://c3js.org/>](http://c3js.org/) charting library. All plot types in 'C3.js' are available and include line, bar, scatter, and mixed geometry plots. Plot annotations, labels and axis are highly adjustable. Interactive web based charts can be embedded in R Markdown documents or Shiny web applications.

Version 0.3.1

Maintainer Matt Johnson <mrjoh3@gmail.com>

Depends R (>= 3.2.2)

Imports jsonlite, data.table, lazyeval, htmlwidgets, dplyr, viridis

URL <https://github.com/mrjoh3/c3>

BugReports <https://github.com/mrjoh3/c3/issues>

License GPL (>= 3)

LazyData TRUE

Encoding UTF-8

RoxygenNote 6.1.1

Suggests testthat, RColorBrewer, knitr, rmarkdown, purrr

VignetteBuilder knitr

c3

C3

Description

An ‘R’ wrapper, or [htmlwidget](#), for the [c3](#) javascript charting library by [Masayuki Tanaka](#).

Usage

```
c3(data, x = NULL, y = NULL, group = NULL, width = NULL,
    height = NULL, axes = NULL, labels = NULL, hide = NULL,
    onclick = NULL, onmouseover = NULL, onmouseout = NULL,
    fixString = FALSE, ...)
```

Arguments

data	data.frame or tibble
x	character column name
y	character column name
group	character column name

width	integer htmlwidget width (separate from plot width)
height	integer htmlwidget height (separate from plot height)
axes	list, use to assign plot elements to secondary y axis
labels	character or list with options: <ul style="list-style-type: none"> • format: list format functions for each parameter label (see c3 data-labels)
hide	boolean or character vector of parameters to hide
onclick	character js function, wrap character or character vector in JS()
onmouseover	character js function, wrap character or character vector in JS()
onmouseout	character js function, wrap character or character vector in JS()
fixString	boolean option to parse grouping variables that contain wildcard characters such as ‘(‘
...	addition options passed to the data object

See Also

Other c3: [RColorBrewer](#), [grid](#), [legend](#), [region](#), [subchart](#), [tooltip](#), [xAxis](#), [zoom](#)

Examples

```
data <- data.frame(a = c(1,2,3,2), b = c(2,3,1,5))

data %>%
  c3(onclick = htmlwidgets::JS("function(d, element){console.log(d)}"))

data %>%
  c3(axes = list(a = 'y',
                b = 'y2')) %>%
  y2Axis()

data.frame(sugar = 20, fat = 45, salt = 10) %>%
  c3(onclick = htmlwidgets::JS("function(d, element){dp = d}")) %>%
  c3_pie()
```

Description

Output and render functions for using c3 within Shiny applications and interactive Rmd documents.

Usage

```
c3Output(outputId, width = "100%", height = "100%")

renderC3(expr, env = parent.frame(), quoted = FALSE)
```

Arguments

outputId	output variable to read from
width, height	Must be a valid CSS unit (like '100%', '400px', 'auto') or a number, which will be coerced to a string and have 'px' appended.
expr	An expression that generates a c3
env	The environment in which to evaluate expr.
quoted	Is expr a quoted expression (with quote())? This is useful if you want to save an expression in a variable.

c3_bar

Bar Plot

Description

Add bars to a C3 plot

Usage

```
c3_bar(c3, stacked = FALSE, rotated = FALSE, bar_width = 0.6,
       zerobased = TRUE)
```

Arguments

c3	c3 htmlwidget object
stacked	boolean place bars on top of each other
rotated	boolean use to make x-axis vertical
bar_width	numeric pixel width of bars
zerobased	boolean

Value

c3

Examples

```
data.frame(a=c(1,2,3,2),b=c(2,3,1,5)) %>%
  c3() %>%
  c3_bar(stacked = TRUE)
```

c3_chart_size	<i>Chart Size</i>
---------------	-------------------

Description

Modify the size of the chart within the htmlwidget area. Generally charts size to the div in which they are placed. These options enable finer scale sizing with the div

Usage

```
c3_chart_size(c3, left = NULL, right = NULL, top = NULL,  
             bottom = NULL, width = NULL, height = NULL, ...)
```

Arguments

c3	c3 htmlwidget object
left	integer padding pixels
right	integer padding pixels
top	integer padding pixels
bottom	integer padding pixels
width	integer pixels
height	integer pixels
...	additional options passed to the padding and size objects

Value

c3

Examples

```
data.frame(a = c(1,2,3,2), b = c(2,4,1,5)) %>%  
  c3() %>%  
  c3_chart_size(width = 600, height = 200)
```

`c3_color`*Color Palette*

Description

Manually assign colors

Usage

```
c3_color(c3, colors)
```

Arguments

<code>c3</code>	c3 htmlwidget object
<code>colors</code>	character vector of colors

Value

`c3`

Examples

```
data.frame(a = c(1,2,3,2), b = c(2,4,1,5)) %>%  
  c3() %>%  
  c3_color(c('red', 'black'))
```

`c3_colour`*Colour Palette*

Description

Manually assign colours

Usage

```
c3_colour(c3, colours)
```

Arguments

<code>c3</code>	c3 htmlwidget object
<code>colours</code>	character vector of colours

Value

`c3`

Examples

```
data.frame(a = c(1,2,3,2), b = c(2,4,1,5)) %>%  
  c3() %>%  
  c3_colour(c('red', 'black'))
```

c3_donut

Donut Charts

Description

Create simple Donut charts

Usage

```
c3_donut(c3, expand = TRUE, title = NULL, width = NULL,  
  show = TRUE, threshold = NULL, format = NULL, ...)
```

Arguments

c3	c3 htmlwidget object
expand	boolean expand segment on hover
title	character
width	integer pixels width of donut
show	boolean show labels
threshold	numeric proportion of segment to hide label
format	character label js function, wrap character or character vector in JS()
...	additional values passed to the donut label object

Value

c3

Examples

```
data.frame(red=20,green=45,blue=10) %>%  
  c3() %>%  
  c3_donut(title = 'Colors')
```

c3_gauge

*Gauge Charts***Description**

Create simple Gauge Charts

Usage

```
c3_gauge(c3, label = NULL, min = 0, max = 100, units = NULL,
  width = NULL, pattern = c("#FF0000", "#F97600", "#F6C600",
  "#60B044"), threshold = list(unit = "value", max = 100, values = c(30,
  60, 90, 100)), height = NULL, ...)
```

Arguments

c3	c3 htmlwidget object
label	list with options: <ul style="list-style-type: none"> • show: boolean • format: function, wrap in JS()
min	numeric
max	numeric
units	character appended to numeric value
width	integer pixel width of the arc
pattern	character vector or palette of colors
threshold	list with options: <ul style="list-style-type: none"> • unit: character one of 'percent', 'value' • max: numeric • values: numeric vector of threshold values for color change
height	integer pixel height of the chart. Proportion of gauge never changes so height scales with width despite this setting.
...	additional values passed to the gauge, color and size objects

Value

c3

Examples

```
data.frame(data=10) %>%
  c3() %>%
  c3_gauge(title = 'Colors')
```

`c3_line`*Line Plot*

Description

Add lines to a C3 plot

Usage

```
c3_line(c3, type, stacked = FALSE, connectNull = FALSE,  
        step_type = NULL)
```

Arguments

<code>c3</code>	c3 htmlwidget object
<code>type</code>	character type of line plot. Must be one of: <ul style="list-style-type: none">• line• spline• step• area• area-step
<code>stacked</code>	boolean
<code>connectNull</code>	boolean connect null (missing) data points
<code>step_type</code>	character, one of: <ul style="list-style-type: none">• step• step-after• step-before

Value

`c3`

Examples

```
data.frame(a=c(1,2,3,2),b=c(2,3,1,5)) %>%  
  c3() %>%  
  c3_line('spline')
```

c3_mixedGeom	<i>Mixed Geometry Plots</i>
--------------	-----------------------------

Description

Use multiple geometry types in a single plot

Usage

```
c3_mixedGeom(c3, types, type = "line", stacked = NULL)
```

Arguments

c3	c3 htmlwidget object
types	list containing key value pairs of column header and plot type
type	character default plot type where not defined
stacked	character vector of column headers to stack

Value

c3

Examples

```
data <- data.frame(a = abs(rnorm(20) *10),
                  b = abs(rnorm(20) *10),
                  c = abs(rnorm(20) *10),
                  d = abs(rnorm(20) *10))

data %>%
  c3() %>%
  c3_mixedGeom(type = 'bar',
              stacked = c('b','d'),
              types = list(a='area',
                          c='spline'))
```

c3_pie	<i>Pie Charts</i>
--------	-------------------

Description

C3 Pie Charts

Usage

```
c3_pie(c3, show = TRUE, threshold = NULL, format = NULL,
       expand = TRUE, ...)
```

Arguments

c3	c3 htmlwidget object
show	boolean show labels
threshold	numeric proportion of segment to hide label
format	character label js function, wrap character or character vector in JS()
expand	boolean expand segment on hover
...	additional values passed to the pie label object

Value

c3

Examples

```
data.frame(red = 20, green = 45, blue = 10) %>%
  c3() %>%
  c3_pie()
```

c3_scatter

Scatter Plots

Description

For scatter plots options are defined in the ‘c3’ function. Options are limited to x, y and groups

Usage

```
c3_scatter(c3)
```

Arguments

c3	c3 htmlwidget object
----	----------------------

Value

c3

Examples

```
mtcars %>%
  c3(x = 'mpg',
     y = 'wt',
     group = 'cyl') %>%
  c3_scatter()
```

c3_selection	<i>Data Select</i>
--------------	--------------------

Description

Define options for selecting data within the plot area

Usage

```
c3_selection(c3, enabled = FALSE, grouped = FALSE, multiple = FALSE,
  draggable = FALSE, isselectable = JS("function () { return true; }"),
  ...)
```

Arguments

c3	c3 htmlwidget object
enabled	boolean
grouped	boolean
multiple	boolean
draggable	boolean
isselectable	character js function, wrap character or character vector in JS()
...	additional options passed to data selection object

Value

c3

Examples

```
data.frame(a = c(1,2,3,2), b = c(2,3,1,5)) %>%
  c3() %>%
  c3_selection(enabled = TRUE,
    multiple = TRUE)
```

c3_viridis	<i>Viridis Palette</i>
------------	------------------------

Description

Use Viridis palette options

Usage

```
c3_viridis(c3, pal = "D")
```

Arguments

c3 c3 htmlwidget object
pal character palette options

Value

c3

Examples

```
data.frame(a = c(1,2,3,2), b = c(2,4,1,5)) %>%  
  c3() %>%  
  c3_viridis()
```

check_stacked	<i>Check groups for stacked plots</i>
---------------	---------------------------------------

Description

For plots where stacking is required this function will define the columns to be stacked based on column headers.

Usage

```
check_stacked(c3, stacked)
```

Arguments

c3 c3 htmlwidget object
stacked boolean

Value

c3 object

 legend

C3 Legend Options

Description

Modify plot elements that relate to the legend. The c3 legend is on by default, this function allows the legend to be removed, or other legend attributes to be set.

Usage

```
legend(c3, hide = FALSE, position = NULL, inset = NULL,
       item = NULL, ...)
```

```
## S3 method for class 'c3'
```

```
legend(c3, hide = FALSE, position = NULL, inset = NULL,
       item = NULL, ...)
```

Arguments

c3	c3 htmlwidget object
hide	boolean or character of parameters to hide
position	character one of 'bottom', 'right', 'inset'
inset	list with options: <ul style="list-style-type: none"> • anchor: character one of 'top-left', 'top-right', 'bottom-left', 'bottom-right' • x: integer pixels • y: integer pixels • step: numeric
item	list with options: <ul style="list-style-type: none"> • onclick: character js function, wrap character or character vector in JS() • onmouseover: character js function, wrap character or character vector in JS() • onmouseout: character js function, wrap character or character vector in JS()
...	additional options passed to the legend object

Value

c3

See Also

Other c3: [RColorBrewer](#), [c3](#), [grid](#), [region](#), [subchart](#), [tooltip](#), [xAxis](#), [zoom](#)

Examples

```
mtcars %>%
  c3(x = 'mpg', y = 'wt', group = 'cyl') %>%
  c3_scatter() %>%
  legend(position = 'right')
```

point_options

Point Options

Description

Modify point options

Usage

```
point_options(c3, show = TRUE, r = 2.5, expand = TRUE,
  expand.r = 1.75, select.r = 4)
```

Arguments

c3	c3 htmlwidget object
show	boolean
r	numeric radius of point
expand	boolean
expand.r	numeric multiplier for radius expansion
select.r	numeric multiplier for radius expansion

Value

c3

Examples

```
data.frame(a = c(1,2,3,2), b = c(2,4,1,5)) %>%
  c3() %>%
  point_options(r = 5, expand.r = 2)
```

RColorBrewer	<i>RColorBrewer Palette</i>
--------------	-----------------------------

Description

Use RColorBrewer palettes

Usage

```
RColorBrewer(c3, pal = "Spectral")

## S3 method for class 'c3'
RColorBrewer(c3, pal = "Spectral")
```

Arguments

c3	c3 htmlwidget object
pal	character palette must match 'RColorBrewer::brewer.pal.info'

Value

c3

See Also

Other c3: [c3](#), [grid](#), [legend](#), [region](#), [subchart](#), [tooltip](#), [xAxis](#), [zoom](#)

Examples

```
data.frame(a = c(1,2,3,2), b = c(2,4,1,5), c = c(5,3,4,1)) %>%
  c3() %>%
  RColorBrewer()
```

region	<i>Modify region elements on both x and y axis</i>
--------	--

Description

Regions are defined in multiple axis by passing a single 'data.frame'

Usage

```
region(c3, regions)

## S3 method for class 'c3'
region(c3, regions)
```

Arguments

c3	c3 htmlwidget object
regions	data.frame with columns listed below. Any columns can be missing but results may be unexpected. <ul style="list-style-type: none"> • axis: character one of 'x', 'y', 'y2' • start: numeric but must match defined axis type • end: numeric but must match defined axis type • class: character css class

Value

c3

See AlsoOther c3: [RColorBrewer](#), [c3](#), [grid](#), [legend](#), [subchart](#), [tooltip](#), [xAxis](#), [zoom](#)**Examples**

```
mtcars %>%
  c3(x = 'mpg', y = 'wt', group = 'cyl') %>%
  c3_scatter() %>%
  region(data.frame(axis = 'x',
                    start = 17,
                    end = 21))
```

subchart

*Add Subchart***Description**

Subcharts are defined in multiple axis by passing a single 'data.frame'. Subcharts are listed as an experimental feature in the [C3 documentation](#).

Usage

```
subchart(c3, height = 20, onbrush = NULL)

## S3 method for class 'c3'
subchart(c3, height = 20, onbrush = NULL)
```

Arguments

c3	c3 htmlwidget object
height	integer pixels
onbrush	character js function, wrap character or character vector in JS()

Value

c3

See AlsoOther c3: [RColorBrewer](#), [c3](#), [grid](#), [legend](#), [region](#), [tooltip](#), [xAxis](#), [zoom](#)**Examples**

```
data.frame(a = abs(rnorm(20) * 10),
           b = abs(rnorm(20) * 10),
           date = seq(as.Date("2014-01-01"), by = "month", length.out = 20)) %>%
  c3(x = 'date') %>%
  subchart(height = 20, onbrush = 'function (domain) { console.log(domain) }')
```

 tickAxis

Axis Tick Options

Description

Modify axis tick formatting options

Usage

```
tickAxis(c3, axis, centered = TRUE, format = NULL, culling = NULL,
         count = NULL, fit = TRUE, values = NULL, rotate = 0,
         outer = TRUE, ...)
```

Arguments

c3	c3 htmlwidget object
axis	character 'x', 'y' or 'y2' axis
centered	boolean (x-axis only)
format	character js function, wrap character or character vector in JS()
culling	boolean or list defining number of ticks 'list(max = 5)' this option effects tick labels (x-axis only)
count	integer number of ticks to display. This effects tick lines and labels
fit	boolean position ticks evenly or set to values (x-axis only)
values	vector. Must match axis format type
rotate	integer degrees to rotate labels (x-axis only)
outer	boolean show axis outer tick
...	additional options passed to axis tick object

Value

c3

Examples

```
data.frame(a = c(1,2,3,2), b = c(2,4,1,5)) %>%
  c3() %>%
  tickAxis('y', values = c(1,3))
```

 tooltip

C3 Tooltips

Description

Modify plot elements that relate to tooltips. C3.js documentation contains an [extended example](#).

Usage

```
tooltip(c3, show = TRUE, grouped = TRUE, format = NULL,
  position = NULL, contents = NULL, ...)
```

```
## S3 method for class 'c3'
```

```
tooltip(c3, show = TRUE, grouped = TRUE, format = NULL,
  position = NULL, contents = NULL, ...)
```

Arguments

c3	c3 htmlwidget object
show	boolean show or hide tooltips
grouped	boolean
format	list with options: <ul style="list-style-type: none"> • title: character js function, wrap character or character vector in JS() • name: character js function, wrap character or character vector in JS() • value: character js function, wrap character or character vector in JS()
position	character js function, wrap character or character vector in JS()
contents	character js function, wrap character or character vector in JS()
...	addition options passed to the tooltip object

Value

c3

See Also

Other c3: [RColorBrewer](#), [c3](#), [grid](#), [legend](#), [region](#), [subchart](#), [xAxis](#), [zoom](#)

Examples

```

data <- data.frame(a = abs(rnorm(20) *10),
                  b = abs(rnorm(20) *10),
                  c = abs(rnorm(20) *10),
                  d = abs(rnorm(20) *10))

data %>%
  c3() %>%
  tooltip(format = list(title = htmlwidgets::JS("function (x) { return 'Data ' + x; }"),
                       name = htmlwidgets::JS('function (name, ratio, id, index)',
                                               ' { return name; }'),
                       value = htmlwidgets::JS('function (value, ratio, id, index)',
                                               ' { return ratio; }')))

```

xAxis

C3 Axis

Description

Modify plot elements that relate to the axis.

Usage

```

xAxis(c3, show = TRUE, type = "indexed", localtime = NULL,
      categories = NULL, max = NULL, min = NULL, padding = list(),
      height = NULL, extent = NULL, label = NULL, ...)

## S3 method for class 'c3'
xAxis(c3, show = TRUE, type = "indexed",
      localtime = NULL, categories = NULL, max = NULL, min = NULL,
      padding = list(), height = NULL, extent = NULL, label = NULL,
      ...)

yAxis(c3, show = TRUE, inner = NULL, max = NULL, min = NULL,
      padding = NULL, inverted = NULL, center = NULL, label = NULL,
      ...)

## S3 method for class 'c3'
yAxis(c3, show = TRUE, inner = NULL, max = NULL,
      min = NULL, padding = NULL, inverted = NULL, center = NULL,
      label = NULL, ...)

y2Axis(c3, show = TRUE, inner = NULL, max = NULL, min = NULL,
      padding = NULL, inverted = NULL, center = NULL, label = NULL,
      ...)

## S3 method for class 'c3'
y2Axis(c3, show = TRUE, inner = NULL, max = NULL,

```

```
min = NULL, padding = NULL, inverted = NULL, center = NULL,
label = NULL, ...)
```

Arguments

c3	c3 htmlwidget object
show	boolean
type	character on of 'indexed', 'timeseries' or 'category'
localtime	boolean
categories	character vector. Can be used to modify axis labels. Not needed if already defined in data
max	numeric set value of axis range
min	numeric set value of axis range
padding	list with options: <ul style="list-style-type: none"> • left: numeric pixels • right: numeric pixels
height	integer pixels to set height of axis
extent	vector or character function (wrapped in JS()) that returns a vector of values
label	can be character or list with options (see c3 axis-x-label): <ul style="list-style-type: none"> • text: character • position: character <p>label position options for horizontal axis are:</p> <ul style="list-style-type: none"> • inner-right • inner-center • inner-left • outer-right • outer-center • outer-left <p>label position options for vertical axis are:</p> <ul style="list-style-type: none"> • inner-top • inner-middle • inner-bottom • outer-top • outer-middle • outer-bottom
...	additional options passed to the axis object
inner	boolean show axis inside chart (Y and Y2 axis only)
inverted	boolean TRUE will reverse the direction of the axis (Y and Y2 axis only)
center	integer or numeric value for center line (Y and Y2 axis only)

Value

c3

See AlsoOther c3: [RColorBrewer](#), [c3](#), [grid](#), [legend](#), [region](#), [subchart](#), [tooltip](#), [zoom](#)**Examples**

```
data.frame(a=c(1,2,3,2),b=c(2,3,1,5)) %>%
  c3(axes = list(a = 'y',
                b = 'y2')) %>%
  xAxis(label = list(text = 'testing',
                    position = 'inner-center')) %>%
  y2Axis()
```

zoom

*Add C3 Zoom***Description**

Enable chart Zoom.

Usage

```
zoom(c3, enabled = TRUE, rescale = NULL, extent = NULL,
     onzoom = NULL, onzoomstart = NULL, onzoomend = NULL, ...)
```

```
## S3 method for class 'c3'
```

```
zoom(c3, enabled = TRUE, rescale = NULL, extent = NULL,
     onzoom = NULL, onzoomstart = NULL, onzoomend = NULL, ...)
```

Arguments

c3	c3 htmlwidget object
enabled	boolean default is TRUE
rescale	boolean rescale axis when zooming
extent	numeric vector
onzoom	character js function, wrap character or character vector in JS()
onzoomstart	character js function, wrap character or character vector in JS()
onzoomend	character js function, wrap character or character vector in JS()
...	additional options passed to the zoom object

Value

c3

See Also

Other c3: [RColorBrewer](#), [c3](#), [grid](#), [legend](#), [region](#), [subchart](#), [tooltip](#), [xAxis](#)

Examples

```
data.frame(a = abs(rnorm(20) * 10),
           b = abs(rnorm(20) * 10)) %>%
  c3() %>%
  zoom()
```

%>%

Pipe operator

Description

Imports the pipe operator from magrittr.

Usage

```
lhs %>% rhs
```

Arguments

lhs	a c3 object
rhs	a pie settings function

Examples

```
data.frame(a=c(1,2,3,2),b=c(2,3,1,5)) %>%
  c3()
```
